

Trail of extinct and active volcanoes, earthquakes across Europe project 2015-2016  
term 1 activity report (Düzlerçamı hiking).

We did a hiking geological formations around us  
with about 115 students.

Photo 1: Walking track about 7 kilometers.

Our school is approximately 10 kilometers away  
from the field trip. The students walked about 7  
kilometers.

Photo 2: Students at the canyon's edge.

Geological formations in the walking area, the  
formation of a deep canyon with thousands of  
years of erosion by water streams, rock types  
and minerals have been observed.

Photo 3: Students interested in mushrooms around them.

Also ecosystem related observations were made.

Photo 4: Kayaç çeşitleri ve mineraller ile gözlem.

The topics that they were curious, they shared with friends by using the internet.

Photo 5: Getting information from the Internet.

They runned across an old larch tree formerly used in made of resin production.

Photo 6: The old larch tree.
